INTRODUCTION

Grandstream GXV3240/GXV3275 IP Multimedia phone supports the BroadWorks Xtended Services Interfaces (Xsi) Directories and Call Log features. This User Guide will describe how to configure and use the BroadWorks Xsi Directories and Call Logs features on GXV3240/GXV3275. To learn more about GXV3240/GXV3275 features, please visit <u>http://www.grandstream.com/support</u> to download the latest "GXV3240/GXV3275 User Guide" and "GXV3240/GXV3275 Administration Guide".

BROADWORKS XTENDED SERVICES INTRODUCTION

BroadWorks Xtended Services Interfaces (Xsi interfaces) are a set of application programming interfaces supporting the integration of BroadWorks functions with Internet services to create Web Application or mashups. Currently, service providers offer a voice service consisting of connectivity, features, phone numbers and usage or minutes. By adding a public web service interface to the offering, the voice services can be integrated with existing Internet services. This integration is done outside of BroadWorks. It can be done by end users, the service providers, or third party developers to provide applications that normally could not be offered in a mainstream offering.

The Xsi-Actions are a set of RESTful APIs that allows resources to be defined and addressed over HTTP with simple XML. This approach requires less client-side software to be written than other approaches and is the overwhelming choice for developers to create Web Applications. These APIs allow a remote application to control and query BroadWorks.

Xsi Architecture and Messaging

The Xsi-Action is a Web Application that runs in a container like the BroadWorks Xtended Service Platform (Xsp). Xsi-Action is responsible for authenticating the requests received from the remote applications. It is also responsible for providing request and response mapping and for routing events received from the BroadWorks core.

When an HTTP requests is received from the remote application and successfully authenticated, then the request is processed by the BroadWorks core and an appropriate response is generated.

Figure 1: Xsi-Actions Requests-Response

The BroadWorks Xsi Directories and Xsi Call Logs feature allows user to access the phonebook and call log entries managed by BroadWorks Servers via the Xsp server.

BroadWorks Xsi Directory and Call Logs Configuration

BroadWorks Server Configuration

The BroadWorks Xsi Directories and Call Logs configuration are completed by the BroadWorks server administrator or service provider. End users should be given Xsp server URI and user credentials to access the service.

GXV Phone Configuration

- 1. Log in Web GUI and register the BroadWorks account on GXV phone.
- Browse to Maintenance →Broadsoft to set configuration for BroadWorks Xsi Directories and Call Logs service:
- Fill the BroadWorks XSP server address in the Server blank. If the BroadWorks Xsp server requires to use the HTTPS, please add the header "https://" ahead of BroadWorks Xsp server URI. For example, "<u>https://xsp1.iop1.broadworks.net</u>".
- Fill the XMPP port number in the Port blank. The default port number is 80. If the BroadWorks Xsp server requires to use the HTTPS, please fill the HTTPS port number "443" in the blank.
- Fill the BroadWorks Xsi credentials in Username and Password blanks.
- If users need to use the selected Directory or Call Log categories, please set the categories as "Enabled".
- End user is able to rename each directory or call log category. If user types a string into the blank, it will override the default name. For example, the Group Directory's default name is "Group" if it keeps blank. If the user fills "Grandstream" into the blank, the phone will display "Grandstream" for the Group Directory.

The following figure shows an example of how to configure the Broadsoft Xsi Directories and Call Log settings on the GXV3240/GXV3275 phones.

Figure 11: BroadWorks Call Log Page

Users can enter different Call Log pages by sliding the screen horizontally. The call log category pages, from left to right, are All calls, Missed calls, Outgoing calls, and Incoming calls page, respectively.

- If the Call Log page displays "Request error, recheck configuration", please check the BroadWorks Xsi configuration, or request technical assistance from the service provider.
 If the Call Log page displays "This item is disabled", please enable the contact category on the WebUI.
- 4. When entering the Broadsoft Call Log pages, the phone will send queries to the server to download the entries information. The screen will display the BroadWorks Xsi Call Logs. Each entry will display the date and time. GXV3240/GXV3275 is able to adjust and display it with the time zone settings.
- 5. Enter the Call Log category page and tap the V icon at the far right end of selected log for making an outbound call to it via the Account 1.

If the log's number displays as the format of "xxxxx-xxx", the first number string, ahead of "-", is the PSTN phone number; the latter one, after the "-", is the extension number. For this kind of entries,

the phone allows user to select the string for dialing after tapping the 💟 icon.

6. GXV3240/GXV3275 is able to sort the BroadWorks Call Logs by name or time. The call logs are displayed in chronological order, the most recent first, by default.

Users also can sort the logs by name by taping at the upper right corner of the screen and selecting "Sort by name". The logs will be displayed in ascending alphabetical order using the caller/called name.
